

Your readiness score, explained

The method behind the number you receive this week. Published so you can argue with it, which is what makes it useful.

01 THE SIX CHECKS · 1 TO 5 EACH, 30 MAXIMUM

- 1 • **Product & certification:** CRT standing, NOM, export-ready SKUs.
- 2 • **Export operations:** markets served, capacity headroom, CIF ability, broker relationship.
- 3 • **Label & compliance:** artwork file custody, over-label flexibility, FSSAI readiness.
- 4 • **Money:** Year-1 budget matched to a real state plan.
- 5 • **Brand:** proof points at home, a coherent place on the price ladder.
- 6 • **Commitment:** a named owner, decisions in days, the 18-to-24-month horizon accepted.

02 WHAT THE EVIDENCE IS

Not opinions. Each check is scored from what you have shown us: two questionnaires, your consultation, and, in Phase 2, documents. A claim without a document scores as a claim.

A five and a one, in plain words. Five on money means the budget funds a two-state plan; one means it does not cover a single state's entry. Five on commitment means an owner who decides in days; one means no named owner and no clock.

03 THE OUTCOMES

24 or more: green light; Phase 2 opens your compliance file now.

18 to 23: two or three named fixes, sequenced with dates, then green. Most fixes clear inside the programme.

Below 18: we re-plan together before you spend on filings.

04 AFTER THE SCORE

The fix cycle. Fixes are named in your briefing, dated in your 1:1, and re-scored at each phase gate. Rising through the programme is the norm; the first score is a starting line, not a verdict.

Privacy, always. Your score travels only inside your India Opportunity Briefing. The cohort sees patterns, never names.

THE POINT

A fix list is normal, and it is the assessment working. The score exists so your money moves only when your file is ready.
